HEAT TWISTER **NEW**

Frees quickly any stuck or rusted part (bolts, nuts, ...)!

Heat Twister is the new accessory for **Smart Inductor 5000**, the multifunction induction heating system for removal and repair used in the automotive industry.

Heat Twister is a valuable accessory to heat metal objects without flame and to help the removal of metal parts such as bolts, nuts, bearings, pulleys, hinges or other components that are stuck, rusted or frozen.

This heating system without flame enables fast removal interventions with a great saving of time and a considerable economic benefit; it avoids the risk of melting plastic parts, as it may happen when using an oxyacetylene torch, and does not damage the working area.

Easy to use, Heat Twister is fit to work with different spiral tools having either horizontal or vertical spirals to operate on different shapes and edges.

It is supplied with a vertical spiral tool 14V (M12/M14); available on request as optional tools are the vertical spiral tools 10V (M8/M10), 18V (M16/M18) and the horizontal spiral tools 10H (M8/M10), 14H (M12/M14) and 18H (M16/M18).

Heat Twister is easy, fast, flexible and it is a necessary tool for any car body shop and repair centre.

Consumables on request:

kit 2 Twister 10V M8/M10
kit 2 Twister 14V M12/M14
kit 2 Twister 18V M16/M18
